Security		
ESET HOME Platform (Update)	x	-
Protection against viruses, phishing, spam, malware and ransomware	x	Protection against viruses, phishing, spam, malware and ransomware secures your device against online threats of all kinds and prevents malware from spreading to other devices. Blocks ransomware that tries to encrypt your system and data and then demands a ransom to decrypt it. Protects you and your personal data from fake or manipulated websites and keeps unwanted emails out of your inbox
Firewall (Update)	x	The firewall prevents unauthorized access to your system and protects you from data theft.
Protection against network attacks	x	In addition to the firewall, network attack protection protects you from malicious network traffic and blocks threats based on dangerous communication patterns.
Secure home network	x	The secure home network allows you to check your home Wi-Fi router and smart devices in the network for vulnerabilities such as outdated firmware or weak passwords and offers various options for troubleshooting.
Theft protection (Anti-Theft)	x	Anti-theft protection locates and protects your missing device so that you retain full control of your data even in the event of theft or loss.
Webcam protection	x	Webcam protection checks all processes and applications running on the computer to prevent unauthorized access to your webcam.
Childproof lock	x	Parental controls allow you to categorize and block websites according to age.
Security report	x	If required, the security report provides a monthly overview of detected threats, blocked websites, intercepted spam mails and blocked webcam access.
Secure banking & surfing	x	Secure banking & surfing protects you and your data thanks to a secure browser when banking and shopping online and on all other websites.
Performance		
Low system load	x	The low system load enables optimum performance and protects your hardware.
Gamer mode	x	Gamer mode improves the performance potential of your device when playing games and running full-screen applications (including videos and presentations).
Plug-in: Browser protection & privacy (NEW)		
Secure search	x	The secure search scans Google search results and linked websites and evaluates whether they are secure or not.
Browser cleanup	x	Browser cleanup removes private data from the browser either on demand or in regular cycles.
Check website settings	x	The website setting checks or blocks allowed website notifications that can interact with the system, even if the website is already closed.
Metadata cleansing	x	Metadata cleansing protects your privacy by removing metadata from media such as EXIF photos (location, camera model, time & date the photo was taken).
Privacy		
Password Manager (Update)	x	The password manager helps you to protect your accounts and data by creating and saving particularly strong passwords and automatically filling in forms. and data.
Data encryption (Secure Data)	x	Data encryption (Secure Data) encrypts your files and removable data carriers (e.g. USB sticks) for the best possible protection so that data is protected at all times in the event of theft.
Cloud-based threat analysis (ESET LiveGuard®)	x	The cloud-based threat analysis (ESET LiveGuard®) analyzes unknown and potentially dangerous samples in a cloud-based test environment.
VPN (NEW)	x	Protect your connections and data transfers in public and private networks with our VPN (Virtual Private Network) - securely and anonymously.
