Upgrade your blood pressure monitor

Developed with experts

BPM Connect was developed with the help of leading cardiologists and has been thoroughly tested against several reference devices to ensure best-in-class blood pressure accuracy.

Thoroughly validated

To validate the performance of the device a clinical study was conducted that followed a protocol developed by the European Society of Hypertension, the Association for the Advancement of Medical Instrumentation in the United States, and the International Organization for Standardization.

Exceptional design

Easy to operate

After downloading the Withings app, you just have to push the only button of your device to pair it—once for good. Once paired, just press the button to take a measurement.

Easy to understand

Unlike most blood pressure monitor screens that are overloaded with information, BPM Connect displays readings with large and simply-lit LED lights. Color-coded indicators also make it easy to understand blood pressure numbers.

Easy to pack

This smart blood pressure monitor consists of only one piece, and its soft cuff allows for quick and effortless transport.

Easy to love

Designed in Paris, the device is modern and minimalist, and made of premium soft fabric to ensure a perfect fit and comfortable measurements when inflated.

Data at your fingertips

BPM Connect syncs via Wi-Fi & Bluetooth with the free Withings Health Mate app, available for iOS or Android.

Automatic in-app journaling

If you have hypertension or just need to know where you stand, BPM Connect provides an effortless way to see trends and share all measurements with a doctor to help keep blood pressure under control.

Easy-to-understand results

Understand results instantly with clear feedback based on recommendations from the European Society of Hypertension (EU) and the American Heart Association (US).

Insightful trends

The ability to view weekly, monthly, or yearly trends gives you an overview of your blood pressure's evolution.

Easy to share with doctors

From a complete report to a snapshot, a few taps on your smartphone is all it takes to share measurements with a doctor or health coach.

Connect with 100+ apps

If you choose to, you can share blood pressure and heart rate metrics with your favorite apps and health programs.

Technology you can trust

Withings launched the world's first connected blood pressure monitor in 2011. More than 10 years of development, user feedback, and advanced research have enabled us to offer a blood pressure monitor of exceptional reliability and longevity.
