Boosted Coverage, Lower Latency Direction Detected, Signal Boosted

Beamforming detects the direction of connected devices and forms a focused signal towards them to improve coverage.

Easier Combos in Games

The upgraded Wi-Fi 6 standard features downlink and uplink MU-MIMO and OFDMA, providing up to 8X (5 GHz) greater network capacity to be more responsive under heavy use.

Boosting or Creating a Wi-Fi is up to You Wi-Fi Router

When Internet access from DSL or cable modem is available for one user but more users need to share the Internet, please use the Router Mode.

Wireless AP

Wireless AP mode is more used to transfer wired connection into wireless. Usually, it is behind a router and doesn't has a DHCP server.
